Section 5. That the taking and acquiring by said City of the real property and easements hereinabove described are deemed necessary for the construction, operation and maintenance of flood control structures and improvements, including sedimentation basins, and any and all appurtenances thereto, a public street or streets and incidents thereto, together with earth excavations or embankments, and slope or slopes and incidents thereto, by The City of San Diego and the inhabitants thereof, for municipal purposes; that such uses are public uses authorized by law (Section 220, Charter of The City of San Diego; Sections 1240.010, 1240.110, 1240.120, 1240.420, 1240.610 and 1255.410, Code of Civil Procedure; Section 4090, Streets and Highways Code; Sections 5100, 5101, 5102, 5023, 5023.1 and 40404, Government Code); that for such public uses it is necessary that The City of San Diego condemn and acquire said real property and easements; that said real property and easements are to be used for the construction, operation and maintenance of flood control structures and improvements, including sedimentation basins, and any and all appurtenances thereto, a public street or streets and incidents thereto, together with earth excavations or embankments, and slope or slopes and incidents thereto, which are planned and located in a manner most compatible with the greatest public good and the least private injury.

Section 6. The Council hereby makes the following specific findings in support of the above-referenced findings contained in Paragraph 5 herein:

(a) The proposed project for which the acquisition is being sought is to protect lands in the United States and Mexico from flooding by the Tia Juana River. The area of the Tia Juana River drainage basin is approximately 1,700 square miles. High intensity storms, steep gradients and lack of flood control storage in existing reservoirs combine to create a serious flood potential in the lower Tia Juana River basin. Since recorded flood data has been compiled (1889), 18 floods have occurred which exceeded the present capacity of the river channel through the Tia Juana River Valley, an average of once every five years. At the present time, flood waters from the recently completed flood control channel in Mexico ending at the International Boundary would flow into the United States at a high velocity with the potential of causing substantial damage to residences, schools, parks and businesses between the border and Interstate 5 Freeway. In addition, flood waters could flow back across the border and inundate a considerable portion of the City of Tijuana. The project will fulfill an international treaty commitment to Mexico by preventing backwater flooding into the City of Tijuana while reducing floodwater velocities coming from Mexico's concrete-lined channel to the presently uncontrolled conditions in the natural channel in the United States. The project will provide flood protection for approximately 400 acres of land in the San Ysidro Area. As a part of the project,

Dairy Mart Road is being relocated and reconstructed at the westerly end of the project.

The design and construction of the project will be under the direction of the U. S. Army Corps of Engineers. Upon completion of the project, operation and maintenance will be administered by the U. S. Government under the International Boundary and Water Commission.

(b) The easterly end of the project is controlled by the location of the Mexican concrete-lined channel where it meets the International Boundary so that the proposed project connects with the Mexican channel. The energy dissipator structure, approximately one mile in length, will be located adjacent to and parallel with the International Boundary in order to prevent the creation of a strip of landlocked parcels between the border and the project and will result in the shortest length of levees at the westerly end of the project. The proposed location of the dissipator structure is necessary in order to provide a sedimentation basin at the downstream end to catch debris and sediment deposited by flood waters due to their decreased velocities. Dairy Mart Road, which presently runs through the proposed sedimentation area, will be relocated to form the westerly boundary of this area. The project location is consistent with both the City's Tia Juana River Valley Land Use Plan and the San Diego Region Comprehensive Planning Organization's policy on the Tia Juana River Flood Plain.

(c) The rights-of-way sought to be acquired are the minimum necessary for the construction, operation and maintenance of the energy dissipator, levee system, low flow channel and the sedimentation basin. Fee simple interest is necessary for the flood control improvements, including the Dairy Mart Road right-of-way, due to the permanency of the project and the future use to which the lands will be put. Easements for street slopes along Dairy Mart Road are being acquired and do not require a fee acquisition.

Section 7. That the City Attorney of The City of San Diego be, and he is hereby authorized and directed to commence an action in the Superior Court of the State of California, in and for the County of San Diego, in the name and on behalf of The City of San Diego, against all owners and claimants to an interest in the above-described real property, for the purpose of condemning and acquiring the fee interests and easements as above-described, and obtaining immediate possession of said parcels, for the use of said City.
