Development Services Inspection Clearances

Use this screen to check on the status of clearances needed to request a final inspection.

Construction projects are not complete, and the building site cannot be occupied, until final inspection has been passed. Even if the project's on-site work has been approved by the inspector, additional information may be necessary. This information can include reports from the structural engineer, special inspector, property owner, or testing laboratory and other department approvals/holds which must be received by the Development Services Department prior to building occupancy.

If you have any other questions regarding this service, please call (858) 492-5070.

Please enter the permit number and year: -
